MORE OF WHAT YOU ASKED FOR.
RIGHT IN YOUR LEARNING ENVIRONMENT.

Announcing the April 2014 release for Blackboard Learn™ 9.1 –
You asked for improvements to key teaching and learning features, and we
heard you loud and clear. These new, innovative elements help you teach
more effectively and help students learn more. The best part? They’re part
of your learning environment, so you don’t need to worry about dealing with
complicated integrations.

APRIL RELEASE HIGHLIGHTS:

A NEW PORTFOLIO: Seamlessly import course assignments and personal artifacts into the rebuilt,
user-friendly portfolio. You can also easily share snapshots to showcase achievements or use for
assessment purposes.

IMPROVED SAFEASSIGN INTEGRATION:
We’ve enhanced the SafeAssign service to deeply integrate with native Blackboard Learn assignments and
inline grading, bringing plagiarism prevention into core instructor and student workflows. Instead of being
a separate content type, SafeAssign is now simply a checkbox on any assignment. SafeAssign also handles
multiple attempts and attachments, drafts, and group submissions.

STUDENT PREVIEW: Quickly view and validate the design of your course content and course behaviors
from the perspective of a student. You no longer need to waste time creating and managing test accounts.

ANONYMOUS AND DELEGATED GRADING:
Grade anonymously and assign grading responsibilities to other assistants, TAs, or reviewers in large courses.

FINANCIAL AID REPORTING:
Demonstrate a student’s academic contribution in fully online or hybrid courses. This provides powerful
data for financial aid and academic activity reporting, especially for students in unique populations, including
athletics and scholarship programs.

Want to take a test drive?
